Future of work

- 'Build back better'
- Remote working
- Acceleration of tech
- What does good work look like?

Vote now

How do you think the Covid crisis has impacted the way you work?

- It has changed the way I work, but things will eventually go back to how they were before
- It has changed the way I work, and some of these changes will be permanent
- It hasn't changed the way I work

UNION
WEEK
31OCT7NOV

Before Covid...

Things were already changing:

- digitisation and automation
- remote and home working
- data-driven management

Digitisation and automation

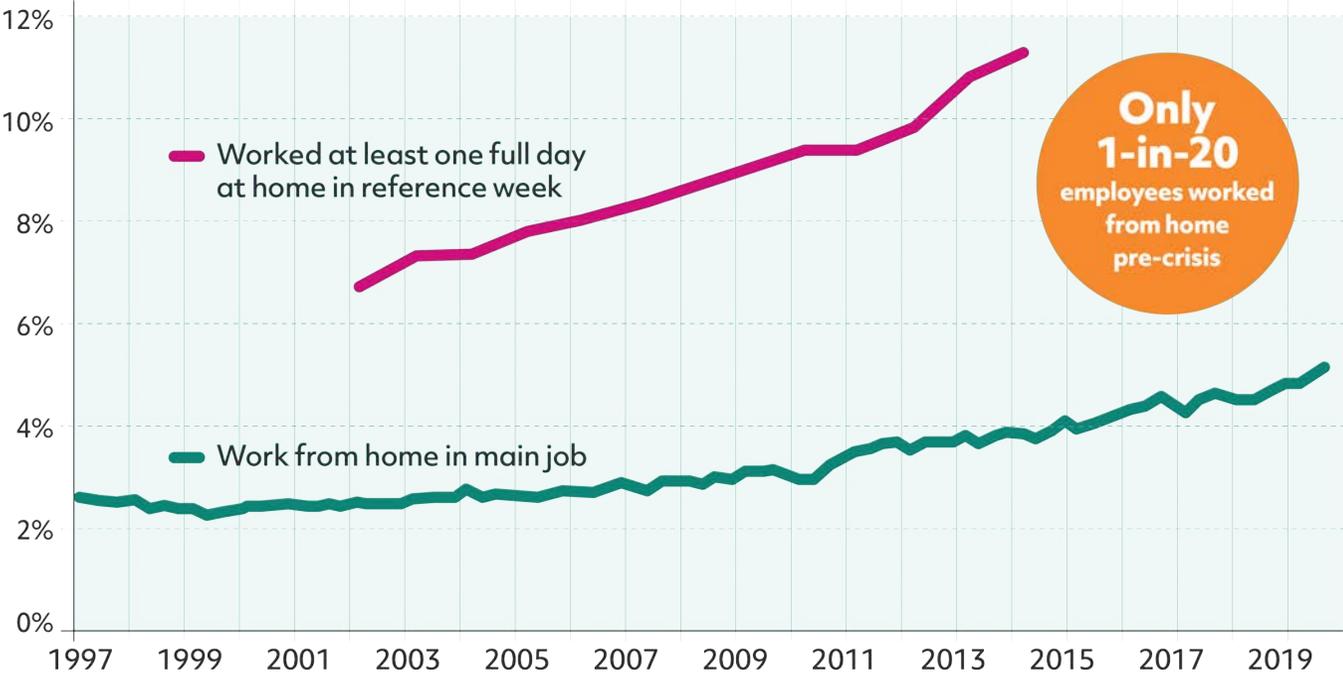

Skill Level	Baseline Digital (% of job adverts in occupations requiring baseline digital skills)	Specific Digital (% of job adverts in occupations requiring specific digital skills)	All Digital (% of of job adverts in occupations requiring digital skills in either category)
Low-Skill	74%	29%	77%
Middle-Skill	83%	59%	85%
High-Skill	75%	67%	83%
All Jobs	77%	56%	82%

Note: The two categories 'baseline digital' and 'specific digital' are not mutually exclusive. An occupation can require both baseline and specific digital skills.

Remote and home working

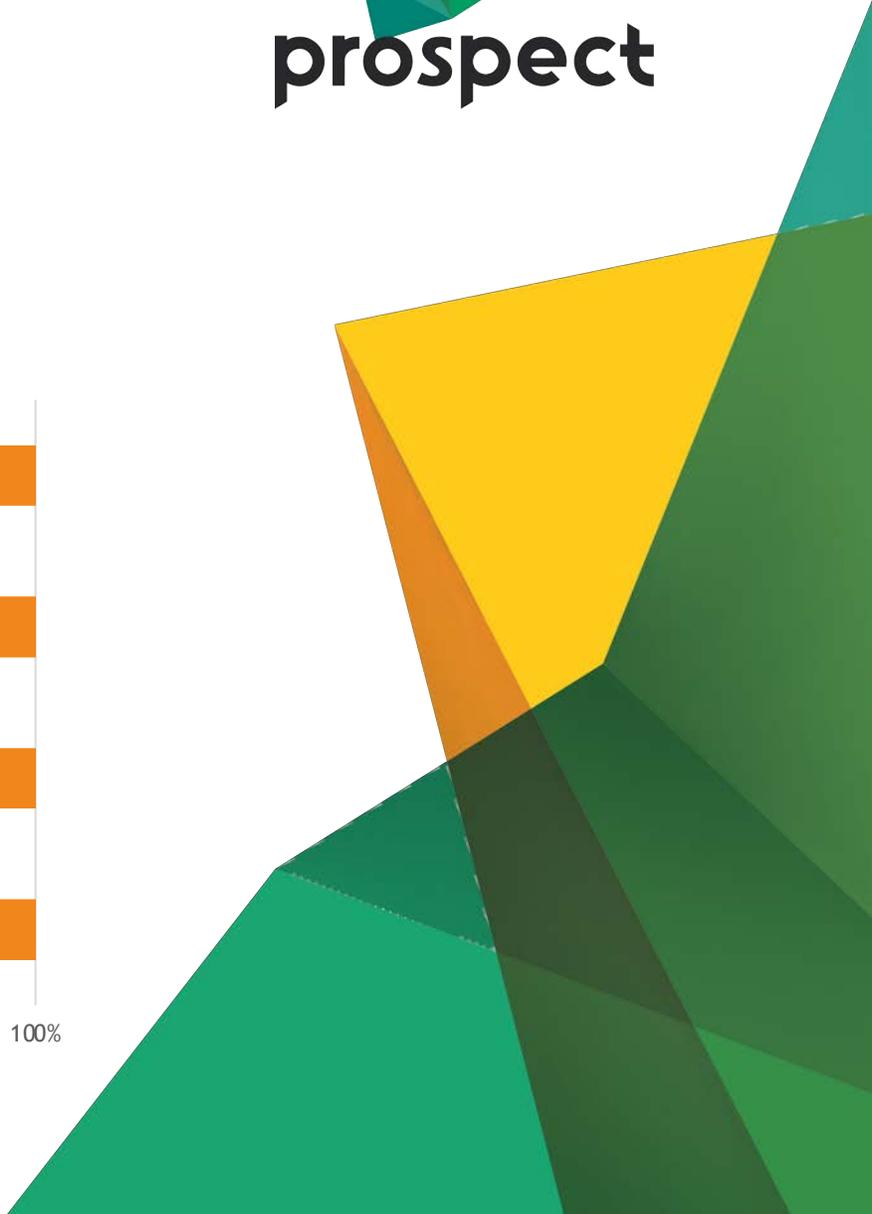

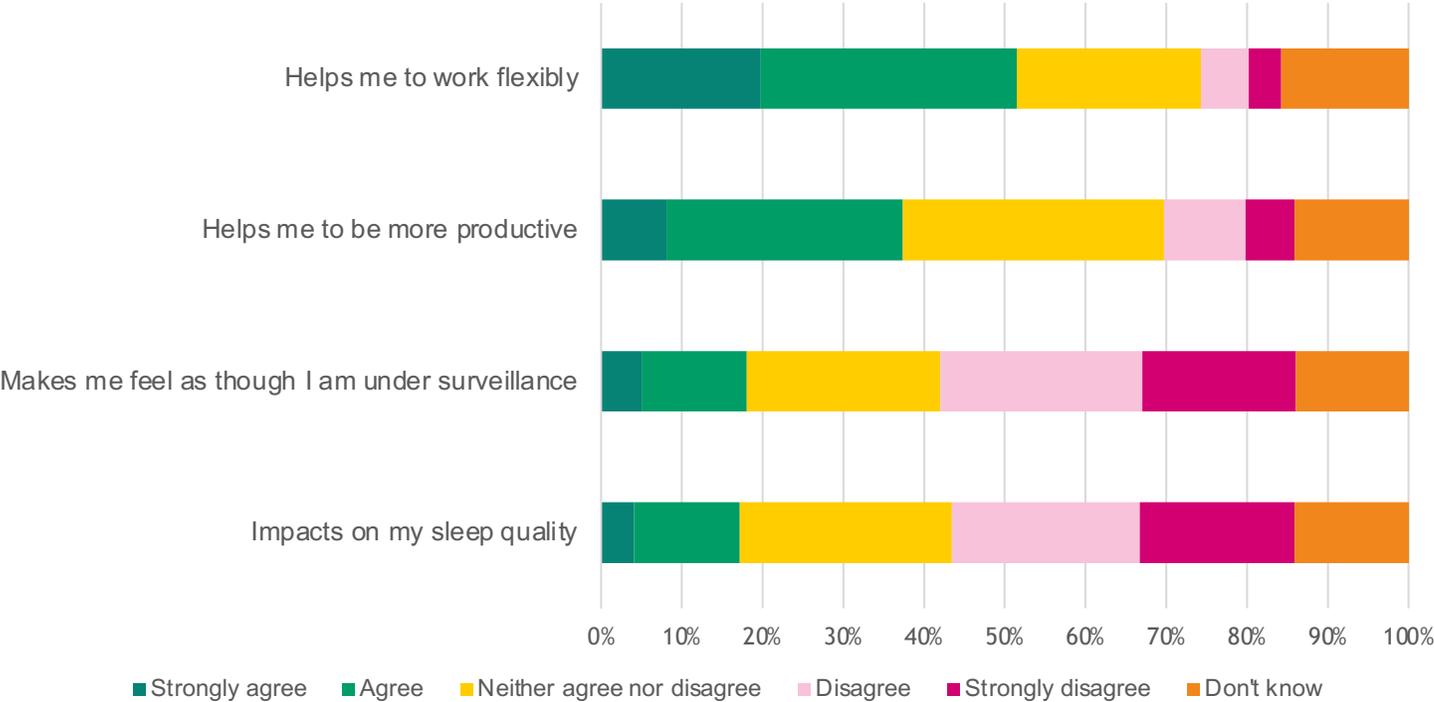

Proportion of workers who work from home in their main job – UK

Source: RF analysis of ONS, Labour Force Survey

Remote to the workplace and home working

Data-driven management

The image shows a screenshot of a Financial Times article. At the top, there is a navigation bar with a hamburger menu icon on the left, the text "FINANCIAL TIMES" in the center, and "myFT" on the right. Below the navigation bar, the article is categorized under "Big Data" with a button that says "+ Add to myFT". The main headline of the article is "Forget the CV, data decide careers". Below the headline is a sub-headline: "The human touch of job interviews is under threat from technology but can new techniques be applied to top-level recruitment?". At the bottom of the article preview is a photograph of a modern office environment with several circular desks, each with a computer monitor and a person working. The desks are arranged in a circular pattern and have blue and yellow partitions.

Data-driven management

- 75% of HR professionals globally said they were using data to “understand workforce performance and productivity”
- 14% of UK organisations already using “machine learning and artificial intelligence to develop people reports”

The boss in your bedroom: As workplace surveillance spreads, what are your rights?

BY JEFF JOHN ROBERTS

May 20, 2020 2:00 PM GMT+1

Creepy technologies are invading European office spaces as people go back to work

Workplaces are trying out surveillance tech such as fever-testing thermal cameras, mask-detection systems and tracking software to prevent a fresh virus outbreak.

Working remotely doesn't mean working without rights. Negotiate a right to disconnect!

UN global union

The surveillance sphere no one is talking about.

American burned out on working from home

01:39

Many Americans who abruptly shifted to working from home amid the coronavirus pandemic say they're putting in longer hours, getting less rest and even burning out as the boundary between work and home disappears.

Breaking News: Foxtons revenue dips despite pent-up lockdown demand

Remote working is causing employees to feel overworked

Angharad Carrick

Remote working is encouraging a culture of so-called EPresenteeism, according to a new survey, leading employees to feeling overworked and overwhelmed.

Do you think your employer is planning to make greater use of new technology and data in how it operates and manages its workforce?

- A** Yes and they are including us in conversations/consultations about it
- B** Yes but they are not including us in conversations/consultations about it
- C** No they are not thinking about any of this

Building our case

Remote monitoring technology

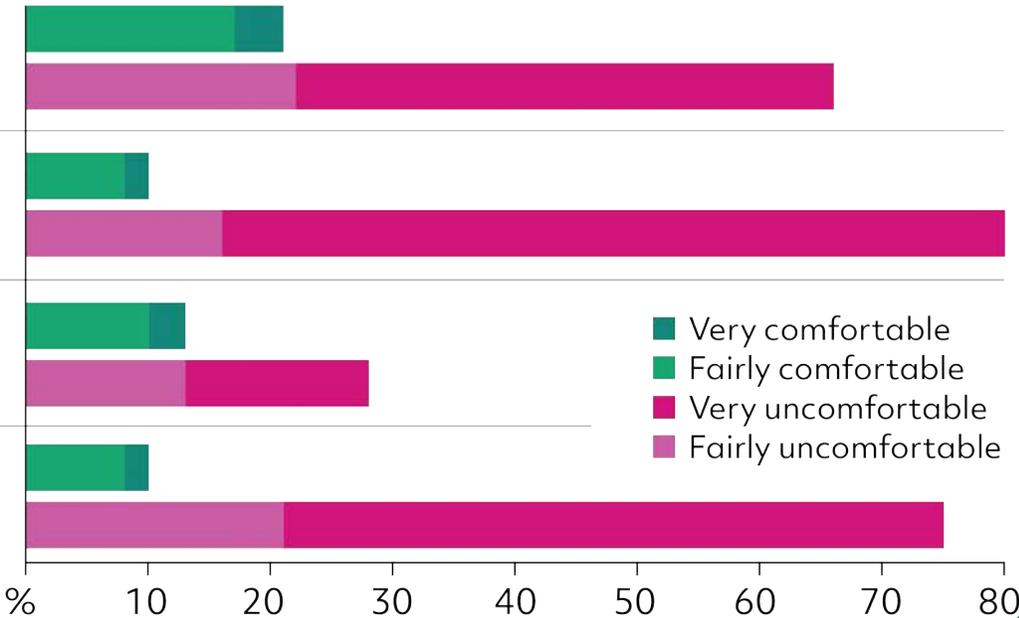

How comfortable would you feel with your employer using each of the following types of technology to manage employees working remotely?

Keystroke – tracking how often and quickly you are using your keyboard

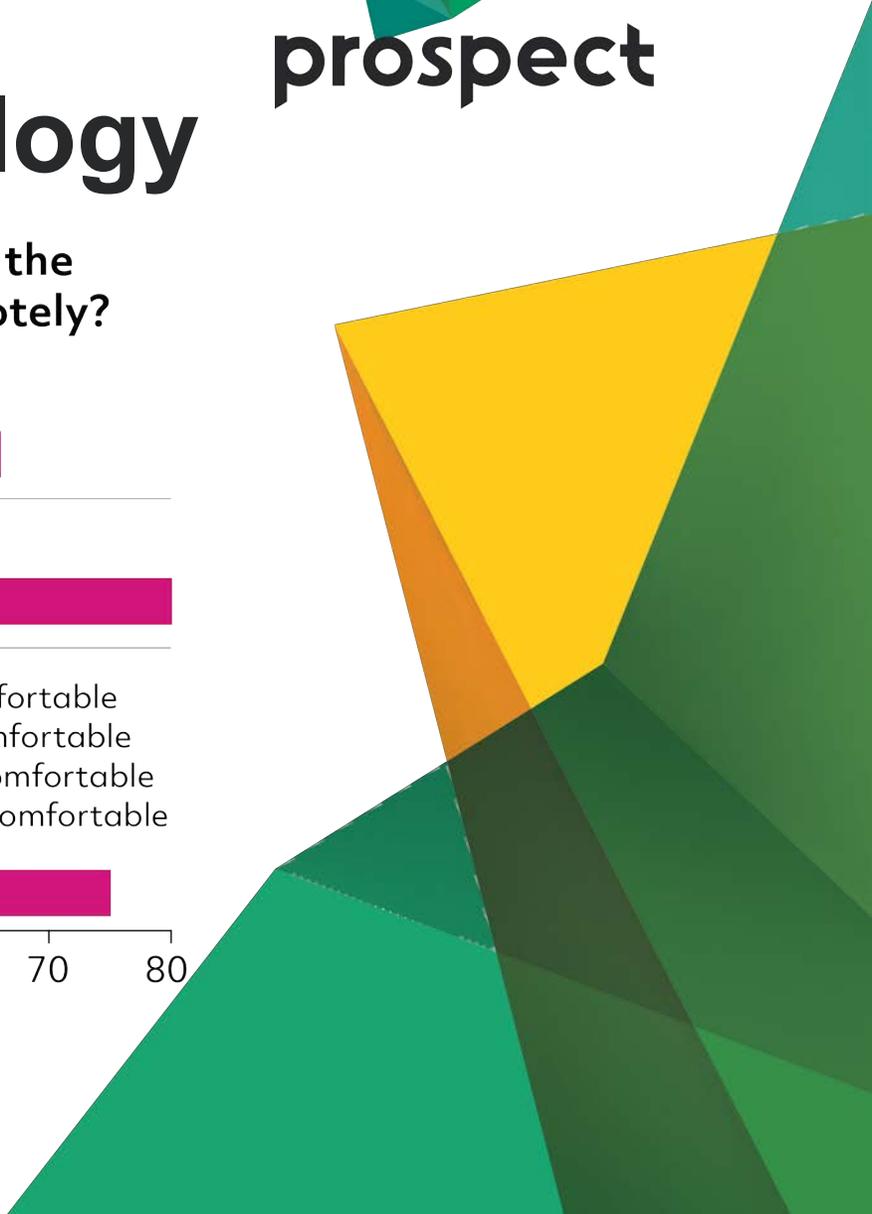

Camera – recording when you are sat in front of your home computer

Electronic tracking – wearable devices to monitor where you are

Automated hiring/promotions – software that will determine who gets hired or promoted

Skills and training

OECD (2019):

“ Collective bargaining can... ensure that all workers and companies... reap the benefits of technological innovation ”

“ Most adult learning takes place at work... Employers' organisations and workers' representatives are therefore key to ensure that enough time and resources are devoted to training in all companies ”

**UNION
WEEK**

Flexible working

- Flexibility around where, and when, work is done can bring big benefits to both employers and employees
- Fair rules and worker voice essential for benefits to be mutual, and costs fairly shared

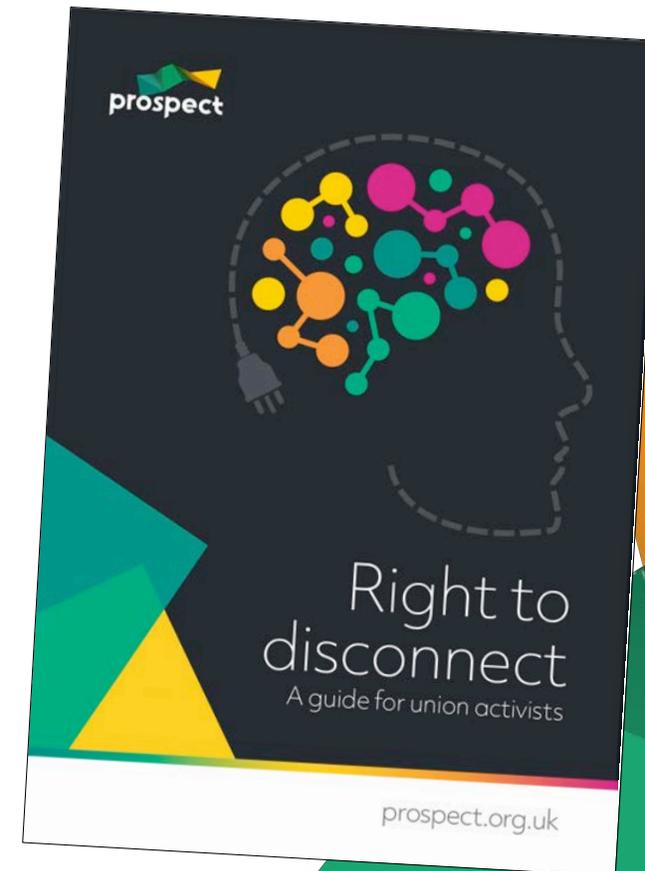

**UNION
WEEK**
31OCT7NOV

Right to disconnect

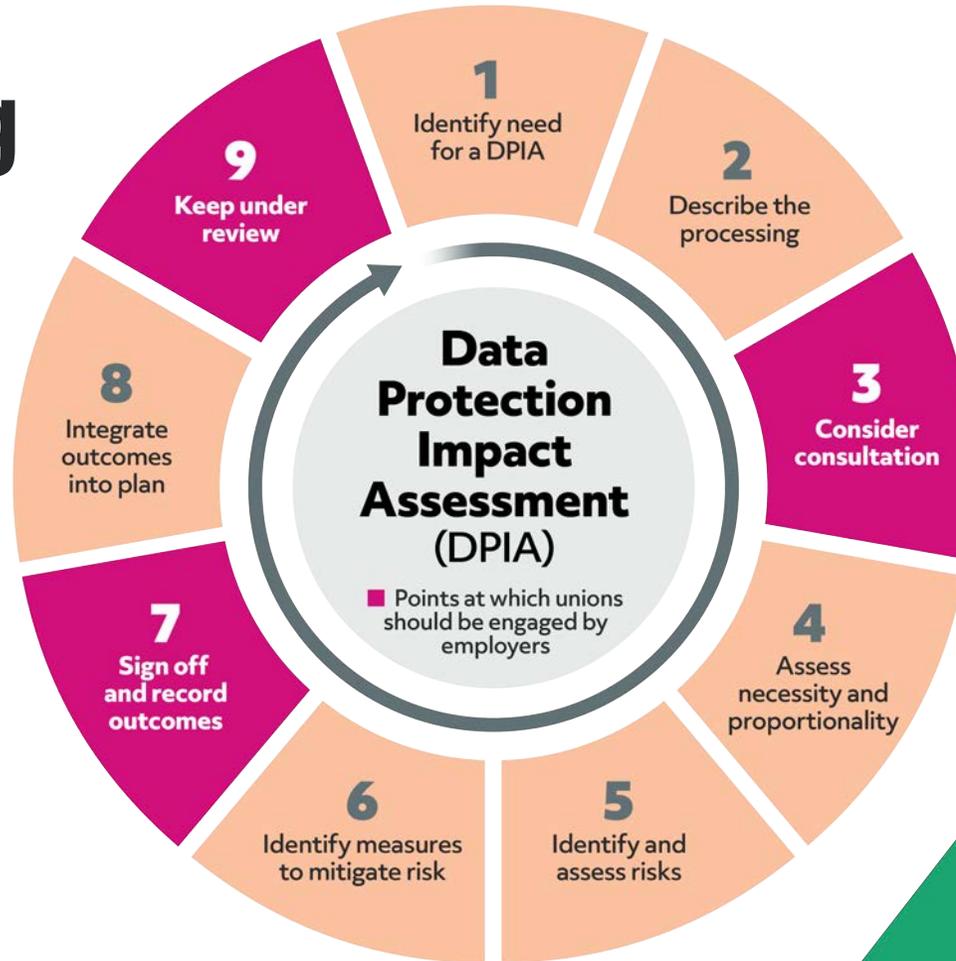

What we want to see:

- Recognition that “always on” culture can harm employee health, wellbeing, equalities and productivity
- Fair rules and clear statements about what is expected of different employees
- Commitment to continuing conversation and consultation about what works for people

Safeguarding our data

- Using existing legal tools
- Data Protection Impact Assessments
- Data bargaining
